

River Rock

River Rock is a natural rounded stone, with distinctive smoothness and colors. Centuries of moving glacial waters and shifting streambeds created this beautiful rock. Classic terrigenous sedimentary rocks consist of rock and mineral grains, or clasts, of varying size, ranging from clay-silt and sand up to pebbles and cobbles.

These clasts were transported by gravity, mudflows, or running water, and eventually deposited in various settings in desert dunes, creek beds, streams and continental shelves.

The term is also commonly used to describe paving stones, usually of granite composition. River Rock edging materials include ashlar and small building stones.

RIVER ROCK – COBBLESTONE

Cobbles are native to California. They come from the San Joaquin River in the Fresno area. They can be used as decorative edging for borders, pathways, or landscaping, as well as in ponds. They can be used for stone veneer on walls or in fireplaces and hearths. The rocks are very smooth, round and unique in color. They have a mixture of tan, brown, gray, charcoal and white. They often have spots or lines on them as well as other unique colors. Cobbles come in 1" – 1½" gravel and 6" – 8" head size. They are sold by the ton in bulk.

River Rock

COBBLESTONE

AVAILABLE SIZES

DESCRIPTION	THICKNESS	COVERAGE AREA
Cobbles	1" – 1½"	120 sf / ton @ 2"
Cobbles	6" – 8"	55 – 60 sf / ton
