

# River Rock

River Rock is a natural rounded stone, with distinctive smoothness and colors. Centuries of moving glacial waters and shifting streambeds created this beautiful rock. Classic terrigenous sedimentary rocks consist of rock and mineral grains, or clasts, of varying size, ranging from clay-silt and sand up to pebbles and cobbles.

These clasts were transported by gravity, mudflows, or running water, and eventually deposited in various settings in desert dunes, creek beds, streams and continental shelves.

The term is also commonly used to describe paving stones, usually of granite composition.

River Rock edging materials include ashlar and small building stones.

## RIVER ROCK – MEXICAN PEBBLE

**Mexican Pebbles** are used for paths, gardens, seeding concrete, ponds and waterfalls. They add a wonderful addition of color to any garden. They are available in various sizes and come in glossy black and red with pink and purple hues. They are sold by the pound, or by the ton packaged in baskets.
