

River Rock

River Rock is a natural rounded stone, with distinctive smoothness and colors. Centuries of moving glacial waters and shifting streambeds created this beautiful rock. Classic terrigenous sedimentary rocks consist of rock and mineral grains, or clasts, of varying size, ranging from clay-silt and sand up to pebbles and cobbles.

These clasts were transported by gravity, mudflows, or running water, and eventually deposited in various settings in desert dunes, creek beds, streams and continental shelves.

The term is also commonly used to describe paving stones, usually of granite composition.

River Rock edging materials include ashlar and small building stones.

RIVER ROCK – RED RIVER

Red River can be used for decorative edging in borders and in ponds for landscaping. It can also be used for stone veneer on walls, in fireplaces and hearths, and for pathways and exposed aggregate. These rocks are very smooth and deep in color. The colors are a mixture of red, green and grays. Red River comes in $\frac{3}{8}$ " and $\frac{3}{4}$ " gravel, 8" – 12" cobbles and double head size. The gravel is sold in bulk, the cobbles are in palletized baskets, and both are sold by the ton.

River Rock

RED RIVER

AVAILABLE SIZES

DESCRIPTION	THICKNESS	COVERAGE AREA
Red River	3/8" Gravel	120 sf / ton @ 2"
Red River	3/4" Gravel	120 sf / ton @ 2"
Red River	6" – 12"	40 – 50 sf / ton
Red River	Double Head Size	30 – 40 sf / ton
